

Traction Drive

TRAILER MOUNT OPTION

TractionDriveMain.jpg

Nifty trailer mounts are now available with a **Traction Drive** option (excl. Nifty 90), allowing the operator to manoeuvre the trailer mount once on-site with minimal effort and without the need for a towing vehicle.

The system works using **Drive Barrels** that swing down to make contact with the road wheels, these then manoeuvre the trailer mount by turning the road wheels directly forwards or backwards.

A Traction Drive **Control Station** near the draw bar engages and disengages the traction drive as well as controlling drive and steering.

Fully Proportional Hydraulic controls, as well as being extremely reliable and simple to use, allow the operator to vary the travel speed improving accuracy when negotiating obstacles or positioning to work etc.
